Varasset offers a unified, flexible approach to today's work and asset management challenges. While just as configurable, Varasset is designed for situations where large enterprise asset management (EAM) vendors often have difficulty.

Dashboards, maps and graphical workflows turn your raw data into a dynamic decision-support structure. Save money by automating, standardizing your processes, and gaining insight into risks, productivity and detailed expenditures.

Use Varasset's workflow engine and configurable templates to manage specialized assets or uncommon work processes.
